Sim—The pilet of the steamer Andes gives his account of the secident in your paper. I hope I may be allowed to make mine. The steamer Colden left New York at 10 o'cleek P. M. on the 9th. After leaving the slip I looked up and down the river, and observed no vessels in motion; there were many lying at anchor. When I got about a length and a half out of the ferry slip, the flood tide carried the Colden up the river. I was in the act of putting my wheel to starboard to steady the Colden, when I made the Andes on my larboard bow. I put the wheel hard to port to avoid the collision. The Andes was so close on to me I could not stop without certain destruction to the Colden and passengers. The Andes struck the Colden midships, abaft the water wheel, carrying away the king post and a part of the Colden's cabin. Finding the Colden fast to the Andes, the engine of the Colden was stopped immediately. When the Andes struck the Colden she was under such headway that she brought the Colden has was under such headway that she brought the Colden to completely round. I make these statements to place the matter in its true light before the public PATRICK CARROLL, Pilot of the Steamer Colden.
